## INTRODUCTION

The Office of Transportation Inventory, in cooperation with the Federal Highway Administration, prepares this biennial traffic report. This report is used by federal, state, and local governmental agencies in determining highway needs, construction priorities, route location and environmental impact studies, and the application of appropriate design standards. The general public uses this information in determining the amount of traffic that passes a given area as they make their development plans and propose land use changes. The above reflects only a few of the many technical uses for this data.

The traffic volumes depicted in this report are derived from data obtained at 6,500 count locations during 1981, 1982, 1983 and 1984. The 1981, 1982 and 1983 count data has been updated to reflect 1984 average annual daily traffic volumes. All primary roads were considered open to normal traffic, that is, roads that were under construction or carried detour routes have been estimated to reflect normal conditions.

Each primary route is subdivided into sections which are listed in order from west to east or from south to north. The length of each section is governed by county lines, corporation lines, changes in highway surface type, junctions, and high volume intersections. Mileages for each route section are "plan mileages" and are shown to the nearest 100th of a mile. The surface type, route number, and length of each section reflect the official road conditions as of December 31, 1984. Average annual daily traffic volumes shown at the end of each route tabulation represent the weighted values for that route.

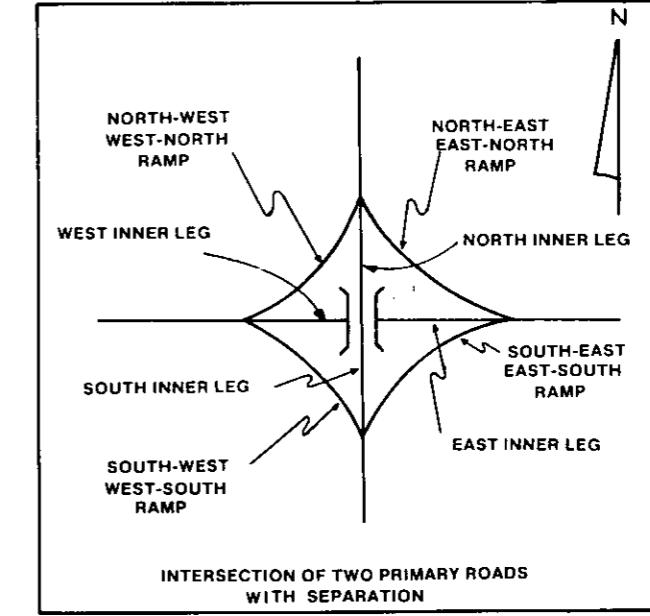

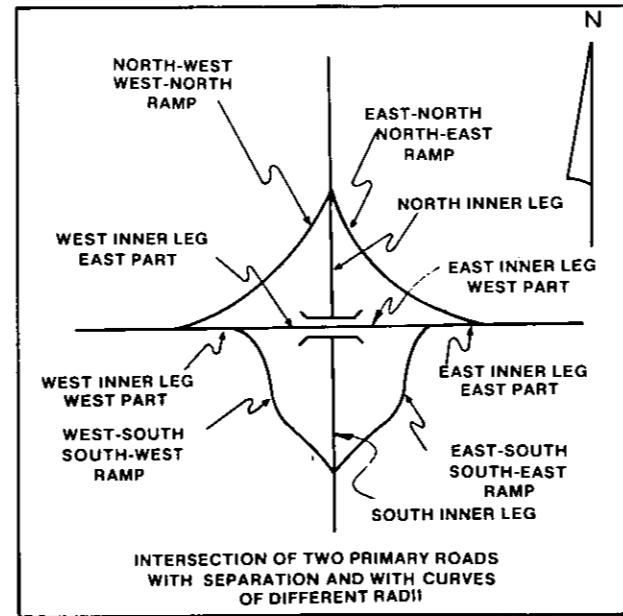

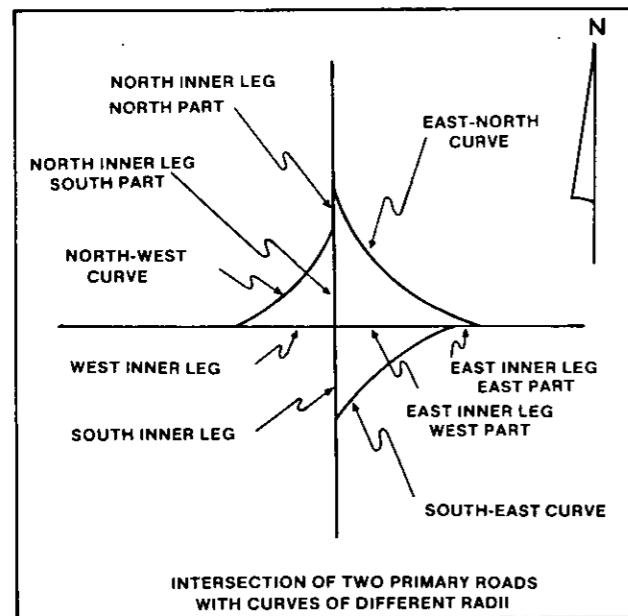

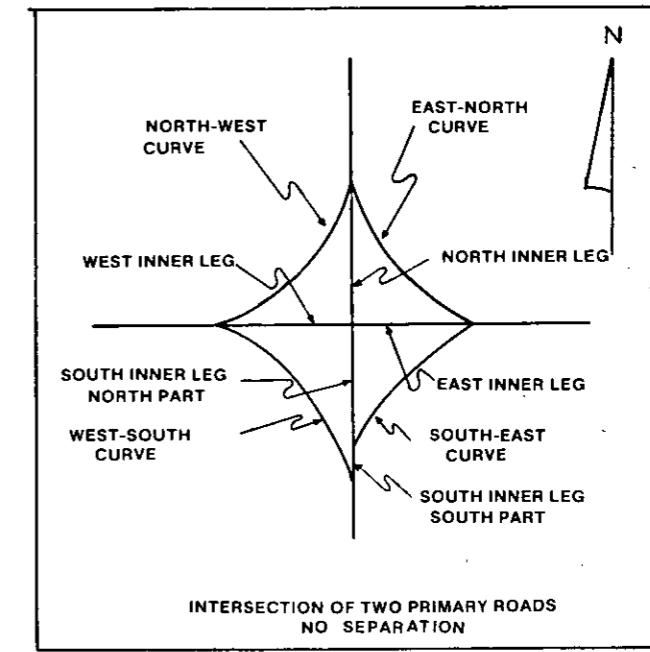

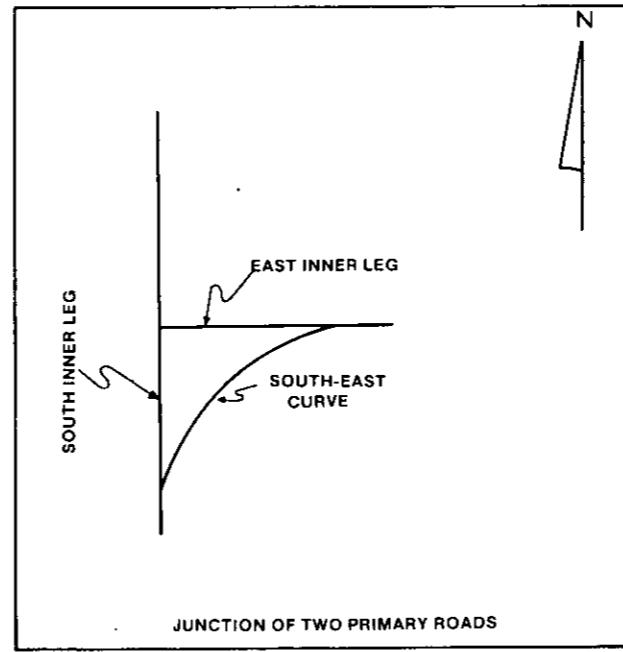

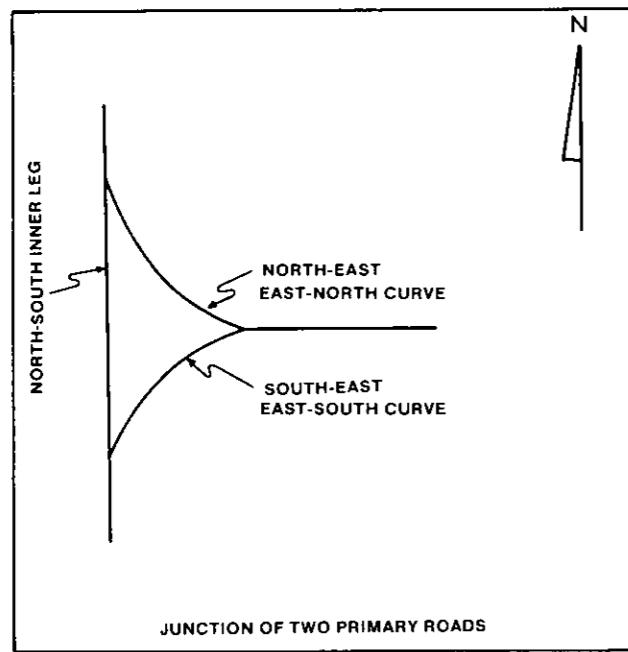

Explanation of table headings is found on the next page.

EXPLANATION OF TABLE HEADINGS

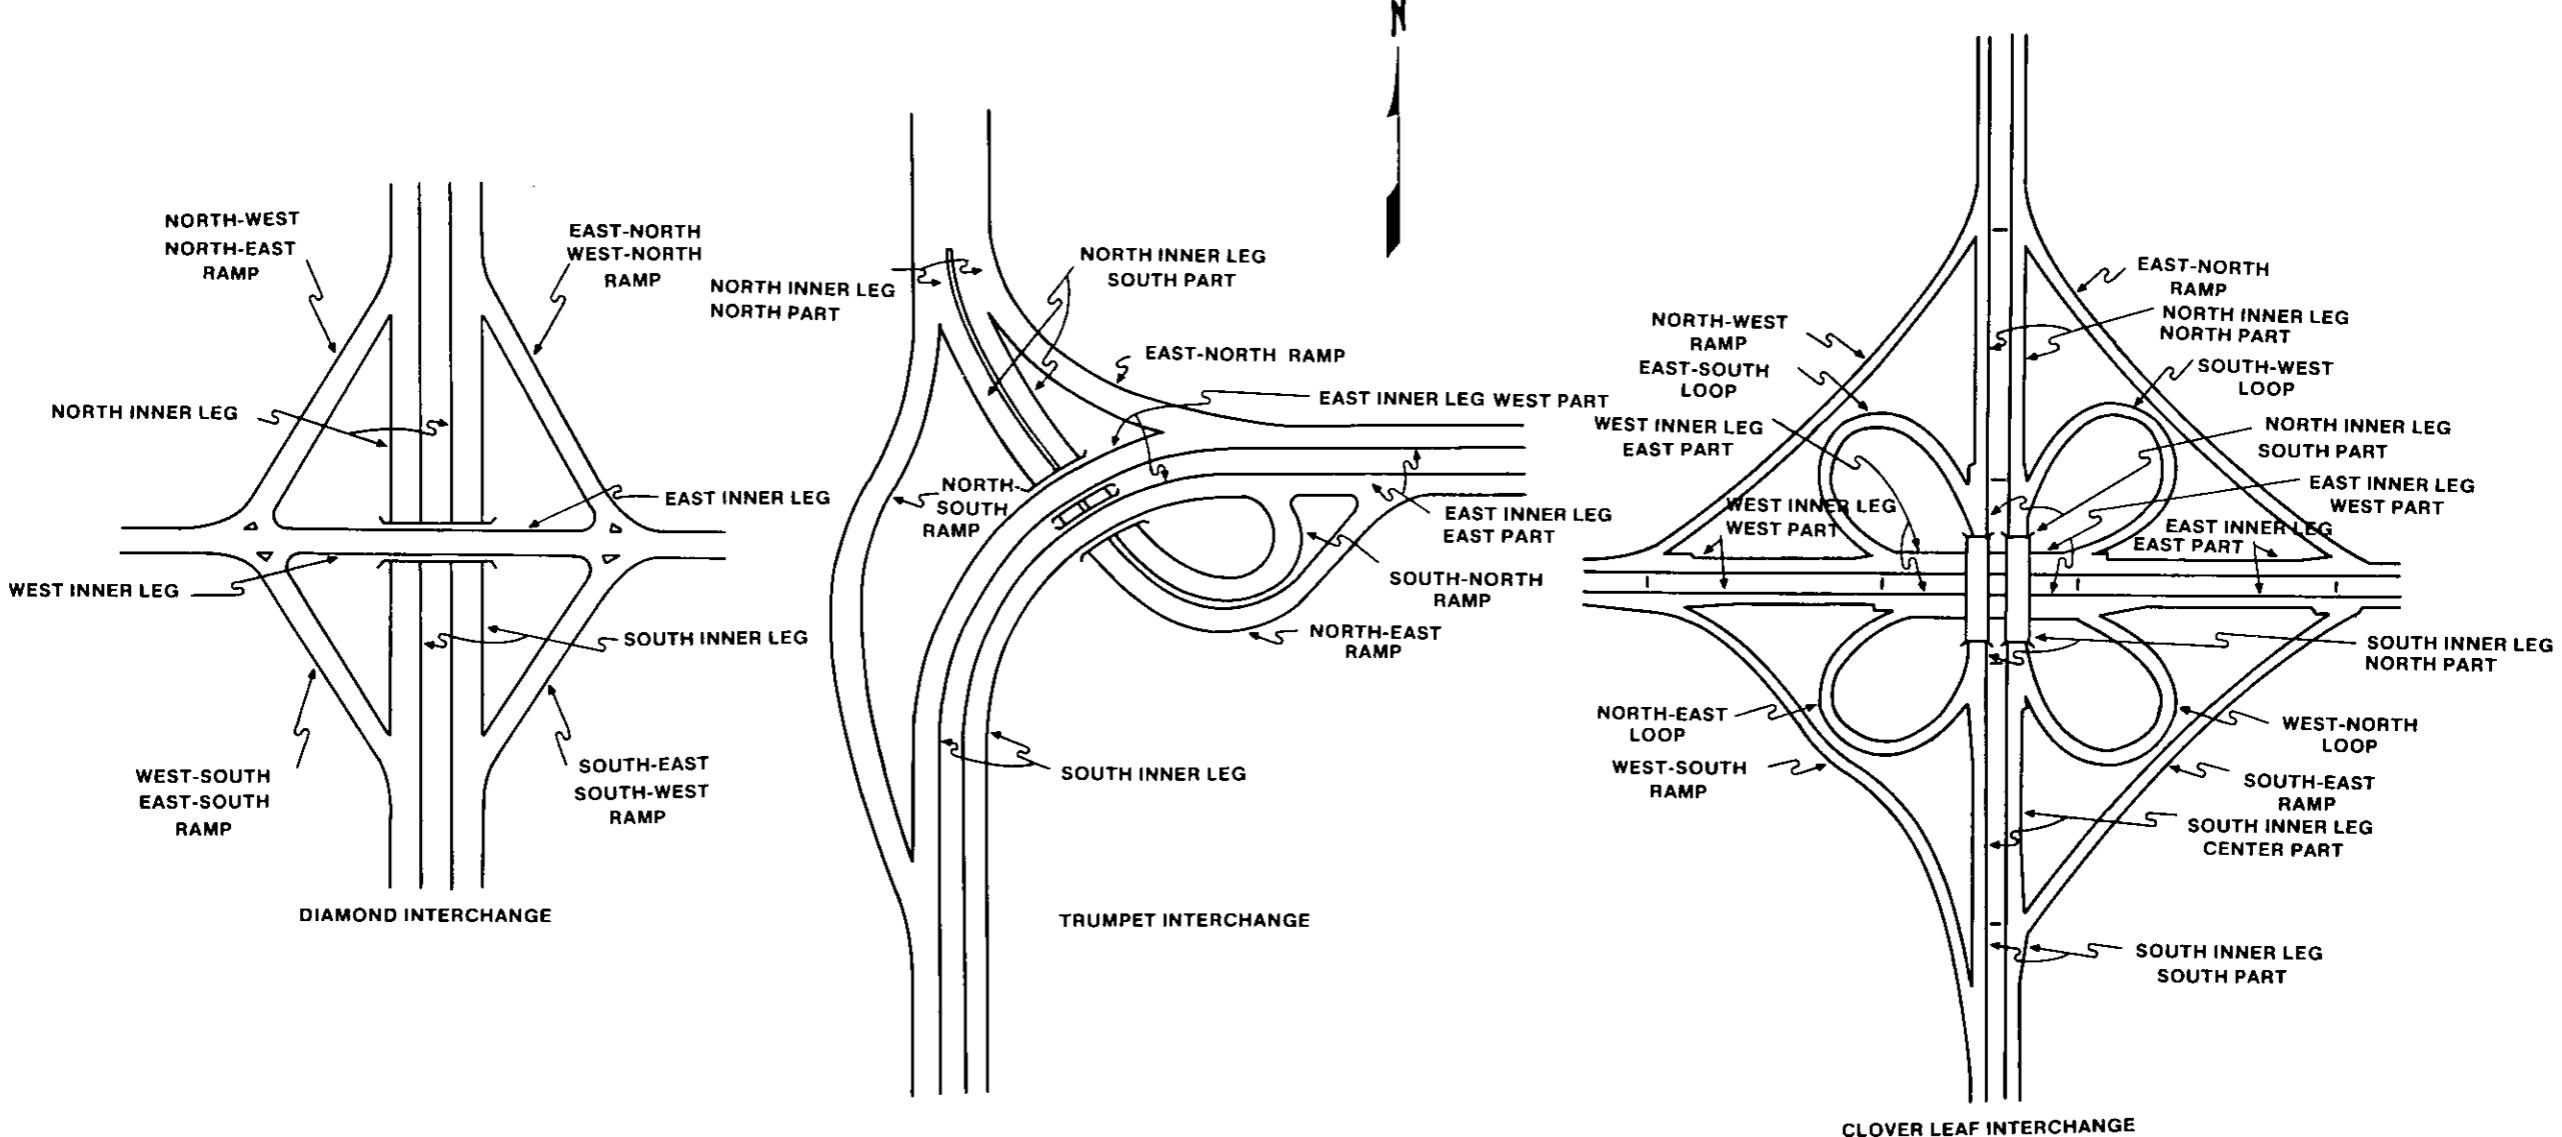

| <u>TERM</u>                                     | <u>DESCRIPTION</u>  |
|---|---|
| <u>ROUTE</u>                                    | The official route numbers assigned to all Iowa, United States, and Federal Interstate Routes in Iowa. Route sections which have two or more assigned Primary Route numbers are listed as follows:<br><br>Two Interstates - Interstate with lowest route number<br>Any Primary Route and Interstate - with Interstate Route<br>Two U.S. Routes - U.S. Route with lowest route number<br>U.S. and Iowa Routes - with U.S. Route<br>Two Iowa Routes - Iowa Route with lowest route number |
| <u>SECTION DESCRIPTION</u>                      | A general description of the route section. Special messages are not indented, general descriptions are indented two spaces. Curves, loops, connections, and inner legs of intersections, junctions and interchanges are fully described and are indicated by a four-space indentation from the left margin of the description column.  |
| <u>SURFACE TYPE</u><br>- and -<br><u>SYSTEM</u> | P = Portland cement concrete, asphaltic concrete or brick pavement; B = Low grade bituminous surfacing;<br>G = Gravel or crushed rock surfacing.<br>R = Rural; M = Municipal  |
| <u>SECTION LENGTH</u>                           | The length of the described highway section shown to the nearest one hundredth of a mile.   |
| <u>AVERAGE DAILY TRAFFIC</u>                    | General unit on measure for traffic, which represents the average annual traffic per day (AADT). It is established by adjusting periodic counts to AADT by using factors derived from permanent continuous automatic traffic recorders. Mileage and AADT on curves, loops, connections and inner legs that are not considered on the traveled way are accumulated and summarized separately with each route.  |
| <u>AVERAGE DAILY VEHICLE MILES</u>              | The product of the road section length times the average annual daily traffic. A separate average annual daily vehicle miles has been computed for trucks and buses. Pickups and vans are not considered trucks. Vehicle miles of curves, loops, connections and inner legs not considered on the traveled way are used to calculate the mainline vehicle miles and average daily traffic totals.   |
| <u>VEHICLE CLASSIFICATION</u>                   | The distribution of vehicle types which could be expected on a typical day.   |
| <u>TOTAL TRUCKS AND BUSES</u>                   | The daily total of all trucks and buses excluding pickup and vans.  |

EXPLANATION OF PHRASEOLOGY USED IN DESCRIBING SECTIONS OF ROAD  
AT VARIOUS TYPES OF PRIMARY ROAD INTERSECTIONS AND JUNCTIONS
