*** ACTIVE NESTS OF MIGRATORY BIRDS ***
 To protect migratory birds, do not conduct construction activities where active nests are present between the dates of April 1 and July 15, inclusive or until the birds have fledged and left the nest. Active nests are nests containing eggs or young of migratory birds. The contractor shall remove all non-active, existing migratory bird nests and monitor to prevent the establishment of active nests.

If evidence of migratory bird nesting is discovered after beginning work, or in the event that migratory birds nests become established, immediately stop work and notify the Engineer. The contractor will not be compensated for any delays or costs associated with the presence of an active nest on the project.
