
EW-401 Temporary Stream Crossing, Causeway or Equipment Pad

(This section last updated 07-02-15)

Generally this standard is not listed on the plans. Temporary Stream Accesses that the contractor elects to use are covered in the Specifications and are incidental.

List the EW-401 on the Standard Road Plans Tabulation only for projects where the EW-401 is **required** to be built (e.g. traffic runaround). When the EW-401 is used as a runaround:

- Pipes should be sized by the Preliminary Design Section in the Office of Bridges and Structures.
- Class 10 material can be used above the pipes.
- Use appropriate bid items to account for the materials needed, including erosion control measures (see [EC-202](#)).
