## **102-5 Existing Pavement**

(This section last updated 05-08-13)

The layout of this tab changed dramatically for the October 2011 revision. The tab columns now match the Pavement Management Information System (PMIS) "Test Section by Milepost" booklet. Several methods are available to retrieve the information to fill out the tab, one of which is discussed below.

To retrieve pavement history information, view the .pdf file of the published "Test Section by Milepost" booklet (available at <http://roadview/PMIS/> and then under PMIS Reports). Find the information needed and either copy or type it into the 102-05 tab. Follow the same steps to incorporate the abbreviations key. The abbreviations can be found at the beginning of the .pdf booklet (usually around page 3).

To obtain information for the Reinforcement (Type) column, one option is to locate the project in ERMS and view the pavement details or standards noted within the plans.
