

## **102-5A Existing HMA Pavement for Recycling**

(This section last updated 07-02-15)

This tab provides information to assess the value of scarified material for other uses. It should be included whenever scarification exceeds 500 tons or 4500 square yards. When these scarification values are exceeded, notify the District Materials Engineer so they can research pavement histories and develop values to be placed in the tabulation.

### Column Descriptions

- % of -4 that is Type 2
  - The percentage of Type 2 frictional aggregate within the fine portion passing the #4 sieve.
- % of +4 that is Type 2
  - The percentage of Type 2 frictional aggregate within the coarse portion retained on the #4 sieve.
- % of +4 that is Type 3
  - The percentage of Type 3 frictional aggregate within the coarse portion retained on the #4 sieve.
- % of +4 that is Type 4
  - The percentage of Type 4 frictional aggregate within the coarse portion retained on the #4 sieve.
