
104-5B Storm Sewer

(This section last updated 01-22-15)

- Equivalent diameters for arch and elliptical pipes can be found on [DR-202](#).
- Outlet pipes should be connected to aprons using connected pipe joints. If an outlet pipe consists of two pipe section sections, use connected pipe joints at both joints. If an outlet pipe consists of three or more sections, connected pipe joints should be used at the last three joints. Provide this information in the Notes column and note they are incidental to the pipe installation.
- When storm sewer is being connected to existing pipe, include [SW-211](#) in the plans. Place a remark in the Notes column the connection is incidental to the pipe installation.
