
105-4 Standard Road Plans

(This section last updated 05-08-13)

This tab will now come with [TC-1 Work Not Affecting Traffic \(Two-Lane or Multi-Lane\)](#) already appearing in the list of Standard Road Plans.

The Date column is blank on purpose. After selecting which revision to choose or update standards from, a message box will appear to alert the user that the listed TC-1 is out of date and ask if they would like the date updated to the correct release date (not necessarily the same date as the revision box selected). If the user selects Yes, the program will open to the List of Standard Road Plans window and TC-1 will be checked. If the user selects No, the window will open but TC-1 will not be checked. Since TC-1 is REQUIRED FOR ALL DEPARTMENT PROJECTS, users should select Yes at this message box. From there, select any additional SRPs as usual. After clicking OK in the List window, TC-1 will appear with the correct date.

This change provides an additional safeguard for us to comply with an Iowa OSHA ruling that all Department projects are required to include this SRP.
