
MicroStation V8 Resource Files

Design Manual
Chapter #1
General Information

Originally Issued: 05-23-07

For MicroStation V8, the Iowa DOT Highway Division uses a Line Style resource file named idotline.rsc, and a Font resource file named idotfont.rsc. These resource files are automatically accessed when MicroStation is initiated, by means of MicroStation variable definitions

The idotfont.rsc Font resource file contains all the fonts that can be used in a MicroStation file. Each font is defined by a font number and a font name.

The idotline.rsc Line Style resource file contains all the custom line styles that are available for use in a MicroStation file. Each custom line style is defined using a custom line style name.

The two resource files listed above must be used on Iowa DOT roadway projects.
