

## Section 4115. Coarse Aggregate for Portland Cement Concrete

### 4115.01 DESCRIPTION.

Gravel or crushed stone particles meeting one of the aggregate durability classes listed below. Acquire aggregates from an approved source meeting the requirements of [Materials I.M. 409](#).

**A. Class 2 Durability.**

No deterioration of pavements of non-Interstate segments of the road system after 15 years and only minimal deterioration in pavements after 20 years of age.

**B. Class 3 Durability.**

No deterioration of pavements of non-Interstate segments of the road system after 20 years of age and less than 5% deterioration of the joints after 25 years.

**C. Class 3i Durability.**

No deterioration of pavements of the Interstate Road System after 30 years of service and less than 5% deterioration of the joints after 35 years.

### 4115.02 QUALITY.

Meet the requirements of Tables 4115.02-1 and 4115.02-2:

**Table 4115.02-1: Aggregate Quality**

Aggregate Quality	Maximum Percent Allowed	Test Method
Abrasion (Cr. Stone)	50	AASHTO T 96
Abrasion (Gravel)	35 (may be increased by 0.1% for each 1% of particles with at least one fractured face)	AASHTO T 96
Alumina <sup>(a)</sup>	0.5	Office of Materials Test Method No. Iowa 222
A Freeze	6	Office of Materials Test Method No. Iowa 211, Method A
Clay Lumps and Friable Particles	0.5	<a href="#">Materials I.M. 368</a>
(a) If the Alumina value fails, determine the A Freeze value for specification compliance. Office of Materials Test Method No. Iowa 222 does not apply to gravel.		

**Table 4115.02-2: Maximum Permissible Amounts of Objectionable Materials**

Objectionable Materials.	Maximum Percent Allowed	Test Method
Coal and carbonaceous shale	0.5	<a href="#">Materials I.M. 372</a>

Organic Materials, except coal	0.01	Office of Materials Test Method No. Iowa 215
Unsound chert particles retained on 3/8 inch (9.5 mm) sieve (Nonstructural concrete)	3.0	<a href="#">Materials I.M. 372</a>
Unsound chert particles retained on 3/8 inch (9.5 mm) sieve (Structural concrete)	2.0	<a href="#">Materials I.M. 372</a>

Note: Chert particle which break into three or more pieces when subjected to the freezing and thawing test will be considered unsound.

Chert in aggregate produced from limestone sources is defined as unsound when any of the fractions of the crushed or uncrushed chert do not meet the soundness requirements.

* For patches and PCC base repair, Class 2 durability or better aggregate will be required if the existing pavement was constructed of Class 2 or lower durability aggregate. If the existing pavement was constructed of Class 3 or Class 3i durability aggregate, use Class 3 aggregate or better and Class 3i aggregate, respectively, in the repair.				

- B. Use crushed stone coarse aggregate for:**
- Aesthetic concrete cast with form liners or rustication. This includes Mechanically Stabilized Earth (MSE) walls and noise walls.
  - Concrete receiving color sealer or texture treatments.
  - Concrete for precast box culverts that are to receive color sealer.

**4115.05 COARSE AGGREGATE FOR BRIDGE DECK SURFACING, REPAIR, AND OVERLAY.**

Acquire from a Class 3 durability or better source meeting the following requirements:

**A. Quality.**
