

**APPROVED SOURCES
CONCRETE ANCHORS**

Acceptance of concrete anchors shall be on the basis of certification from an approved manufacturer and approved brand names. Approval of concrete anchors shall be based on pullout loads. Maximum loads shall not exceed 1/3 of the values.

When galvanized anchors are specified, zinc coating shall be applied by either hot dipped galvanizing to meet the requirements of ASTM A153, Class C or mechanically galvanized to meet the requirements of ASTM B695, Class 50 Type 1.

Approved manufacturers, approved brand names and the pullout loads for each brand is listed in Appendix A. Pull-out test loads shall be tested by an independent laboratory in accordance with ASTM E488, tension (pull-out) test, using concrete with compressive strength of approximately 4000 psi.

Appendix B contains manufacturer brochures of individual approved brand names listing installation instruction, anchor sizes, embedment depth, spacing requirements, edge distance required to obtain maximum pull-out (working) loads, etc.
