

FTP Site Access

I have placed a folder for our Concrete Barrier project on the Iowa Department of Transportation's FTP site.

Please follow the instructions below to access this main folder. Within this folder, you will find a folder for your county. Please place all of your photos for each of your bridges, along with any explanatory guidelines needed to match the photos with their respective bridges, in the appropriate folder. These guidelines could be as simple as stating the photo file contains the FHWA number of the bridge, to a list of photo file names and which bridge each belongs to. Your current method for connecting your photos to your bridge information is sufficient. There is no need to rename your files.

It is expected that you will have more than one photo for each bridge. Please copy all photos into the folder. Someone on our end of the project will manually sort through the photos and determine which type of barrier each bridge has.

FTP Site ID and Password:

`ftp://ODAC:PM8YPM94@165.206.203.34/ConcreteBarrier_PicturesFromCounties/`

Copy & Paste the FTP Site address, listed above, into the Windows Explorer Address field, as shown at the right, and press the **Enter** key.

NOTE: Do not use Internet Explorer, Firefox, or any other web browser as it may not produce correct results.
