

## **Bid Proposal 14860**

### **Statewide Roadway Data Collection Services**

#### **Responses to question Set 8**

1. The data dictionary in Appendix B requires the collection of Transverse Profile Adjacent Lane Slope. In order to calculate this measurement we would need to add a LiDAR sensor to the collection vehicle. If the roadway asset data option were not selected, this would mean adding a LiDAR sensor to each collection vehicle for this single attribute, resulting in a large increase in cost. Will the Department accept pricing that does not include the collection of Transverse Profile Adjacent Lane Slope? If so, would you like to see pricing for this deliverable listed separately?

**R:**

2. Section 6.8 6.8 of the RFP, Licenses, states that “The Contractor shall include the cost for all software licenses and annual software maintenance fees require for its work.” Assuming we are proposing software that will allow the Department to view and interact with the processed data, how many licenses of the application will you require for this contract?

**R:** Since this is s request for proposal (RFP) we encourage all bidders to propose and explain the appropriate pricing structure for the request. We cannot determine the number of licenses as each bidder may have a different pricing model.
