

Proposal 15982 – I-35 / US 30 Fiber Infrastructure Relocation

Questions and Responses

Q1) After reading the special provisions of paragraph 2.07 Fiber Optic Cable sub paragraph C. Method of Measurement & Basis of Payment. It is my understanding that there is to be a bid line item for both the 96 SM Fiber and the 288 SM Fiber. There are no bid line items on the bid tab for either of these items. Can you please clarify this?

R1) See Addendum 1

Q2) Is this contract only having us test the fiber and not splicing it? If there is no splicing on this contract will there be another RFB for the splicing? If so, when will it be available?

R2) The splicing of fiber is not a part of this project. It has not been determined if or when a subsequent RFB for splicing will be released.

Q3) The section of 96ct FO cable on I-35 is sufficiently long that it may be reasonable to splice the cable mid span. Would this be allowed?

R3) No mid-span splicing will be allowed. Each Fiber segment installed shall be one continuous cable.

Q4) I just wanted to confirm there was not any pricing for fiber install on I-35 relocation project? It appears to be conduit install only on this RFB and the special provisions are a generic listing that includes fiber specs but there is no fiber to be installed on this RFB.

R4) See response to Q1.

Q5) Is this project prevailing wage?

R5) It is not.
