

**Proposal16355**  
Construction of Brine Buildings for Corning and Avoca Maintenance  
Facilities

**Questions and Responses Set 2**

**Q1)** . (Electrical) In Avoca are we adding a new 200A meter loop on the existing pole just to feed the new brine building or is it supposed to replace the existing CT metering to feed everything at the site, if its to replace the existing is 200A large enough?

**R1 This new service is for Brine Building only.**

**Q2** In Corning the MDP already has seven disconnects in it, we are allowed six operations when there is not one main disconnect for the service. If we add another one it would be eight and I don't believe the state electrical inspector will pass it. If you could get some answers for me so I can proceed with my quote I would appreciate it

**R2) DOT will look into this post and update.**
