

**DEVELOPMENTAL SPECIFICATIONS
FOR
CONSTRUCTION PROGRESS SCHEDULE**

**Effective Date
December 19, 2006**

THE STANDARD SPECIFICATIONS, SERIES 2001, ARE AMENDED BY THE FOLLOWING MODIFICATIONS AND ADDITIONS. THESE ARE DEVELOPMENTAL SPECIFICATIONS AND THEY SHALL PREVAIL OVER THOSE PUBLISHED IN THE STANDARD SPECIFICATIONS.

Replace all of Article ~~1102.08~~ 1108.02, I with:

I. Construction Progress Schedule.

At the preconstruction conference, the Contractor shall provide the Engineer with a preliminary schedule. At least 5 calendar days prior to starting work, the Contractor shall furnish the Engineer with 3 copies of a satisfactory construction progress schedule. This schedule shall be, as a minimum, a chronologically sequenced bar chart showing the proposed starting dates and durations for each item of work. The durations shall include the estimated number of weather delay days. The schedule shall also clearly show the controlling item of work for each day of the schedule, and the intended rate of production for each item of work. In addition, it shall include project staging, project required milestones, and project suspensions that are 3 working days or longer.

The progress schedule shall be based on an adequate daily working hour schedule, with sufficient materials, equipment, and labor being furnished to ensure completion of the contract within the contract period. The Contractor shall commence and prosecute the work in accordance with the accepted progress schedule, with forces and equipment adequate to complete the controlling operations on schedule.

The Engineer will use the progress schedule to identify controlling operations and as a check on the rate of progress. The Engineer will jointly review the schedule with the Contractor at least every 2 weeks to determine if progress is satisfactory. The Engineer may also request the Contractor to revise the schedule for any of the following reasons:

1. The project completion or intermediate completion targets are delayed 10 or more working days.
2. The Engineer determines that the progress of the work differs significantly from the current schedule such that it is unlikely the project will be completed within the contract period.
3. A contract change order requires a revision of the Contractor's work sequence or the method of performing the work.

Revised progress schedules shall be prepared and submitted to the Engineer within 5 business days after the request.

Acceptance of the Contractor's progress schedules by the Engineer does not waive any contract requirements.

If the Contractor fails to supply a satisfactory schedule or any revised schedule, the Engineer may withhold progress payments until a schedule has been submitted and accepted.

No direct payment will be made for furnishing construction progress schedules or revisions. The cost of the schedule shall be included in the cost of mobilization.
