
Remember!

Erosion Control Updates

If you are Erosion Control certified, you **MUST** complete one update class in the five-year period between certification and each recertification to be eligible to recertify. Erosion Control updates will only be offered through web based training. If we do not have record of you taking one update class, you will not be allowed to take the recertification exam.

You will not receive credit for update classes taken in the year you earned the certification or in the year your certification expires.

We strongly encourage that updates are taken every year if possible. Changes and important new information are presented that could affect how you do your job!

Example

Certification earned in Spring 2017.
Certification then expires December 31, 2021

An update must be taken in **AT LEAST** one of these four training seasons.

2017-2018	2019-2020
2018-2019	2020-2021

Updates via the web

Erosion Control updates will only be offered through web based training. These will be available January 1 thru May 31. If an individual plans on taking the Erosion Control update, they will need to go to <http://www.iowadot.gov/training/ttcp.html>
