DESIGNER INFORMATION

REVISIONS: New. Replaces RF-30C.

PIPE CULVERT (INSTALLATION DETAILS)

When unclassified pipe is specified, furnish and install a class of pipe meeting the requirements on the chart. corrugated pipe and instalation to furnish as iong as the
selection conforms to the limits indicated for the type specified

When furnishing Steel Arch Pipe, furnish pipe with corrugations as specified in plans.

Minimum allowable cover for concrete and metal pipe is 2 feet for roadway culverts and 1 foot for entrance culverts.
Maximum cover for all sizes and installations of concrete arch pipe is 12 feet.
For all sizes and installations of polyethylene pipe: minimum cover $=2$ feet
maximum cover $=24$ feet for 12 to 24 inch pipes
Where a pipe size not listed in the tablis requred the indicated for the next smaller size will apply.
Special installations may be designed to exceed indicated cover by specific modification of one more of the following conditions:

1. Bedding Class
2. Pipe Strength (including special design pipe)
3. Compaction requirements for backill or cover material 5. Controlled trench width

Where site conditions favor such modifications, significant economy may result from special design installations and these should be considered. Special designs will speceify particular modification of construction requirements or design criteria as applicable. Necessary modifications of normal requirements
will not ordinarily be paid for seperately but will be included in will not ordinarily be paid for
the price bid for culvert pipe.

DESIGN CRITERIA FOR CONCRETE PIPE
The height of cover tables have been prepared from data in Concrete Pipe Association using the values listed below.

FOR EMBANKMENT CONDITIONS
Fill Material Density $=w=120$ lbs
Settlement Ratio $_{*}=$ rsd $=+0.5$
Projection Ratio $\quad=\mathrm{p}=0.9$ (Class "C" bedding)
$\begin{array}{ll}\text { Factor of Safety } & =p=0.7 \text { (Class "B" bedding) } \\ & =\text { F.S. }=1.33 \text { on Ultimate Strength }\end{array}$

* Using a ratio of lateral to vertical earth pressure (k) of 0.37 (saturated yellow clay) and a coefficient of internal friction (u) of 0.34 .
The values shown for concrete pipe were calculated for concrete pipe placed under embankment conditions. These concrete pipe placed under embankment conditions. These
values do not apply to to design and installation of sanitary values do not apply to to design and instalation of sanitary embankment conditions.

| $24 "-42^{\prime \prime}$ | $\frac{3}{8}$ | 4 |  |
| $48^{\prime \prime}-60^{\prime \prime}$ | $\frac{1}{1 "}$ | 8 |  |
| $66^{\prime \prime}-84 "$ | $\frac{5}{8}{ }^{\prime \prime}$ | 8 |  |

Length for pay purposes
TYPE "D" SECTION (SINGLE BEVEL)

Length for pay purposes
TYPE "D" SECTION (DOUBLE BEVEL)

Fabricate concrete pipe elbows and Type "D" pipe sections according to AASHTO M 170 for the size and class of pipe
specified. Meet the requirements of AASHTO M 32 for wire specified.
reinforcing.

Unless specified otherwise, bevel the Type "D" section on a
7.5 degree miter. The bevel may be provided on either the 7.5 degree miter. The bevel may be proviced on either the tongue end or groove end of the pipe. In certain cases, be bion
ends of the pipe section may require the beveled end.
Type "D" pipe sections will be included in the measurement for pipe culvert. No payment will be made specifically for the Type " $D$ " section bevel. This is incidental to the price bid. The Contractor may substitute an approved elbow for "D" section bends of 15 degrees or less. Such elbows will not be measured for payment bu
price bid for culvert pipe

Refer to the plans for degree of elbow required for each
individual installation measured along centerline of pipe. Design length of pipe will be considered to be 6 ' 0 "
Fabricate elbows using a method approved by the Engineer and which results in a ainished product indicated hereon. The typical method for fabricating elbows is as follows: Steel rods
as specified, are attached to the normal wire reinforcing cage as specified, are eatached to the normal wire reinforcing cage
as indicated heren. After pipe is cast, make a cut $50 \%$ of the degree of elbow desired as indicated and cut the reinforcing
rods and mesh on centerline of the cut. Rotate the severed rods and mesh on centerline of the cut. Rotate the severed
section of pipe 180 degrees and reweld the reinforcing to th section of pipe opotagrees and reweld the reinforcing to opposite rods. Patch the remaining opening with ceme
mortar to complete a satisfactorily completed elbow as
shown.
For pipe sizes up through $48^{\prime \prime}$ in diameter, bends may be accomplished in increments of 7.5 degrees by using standard in appropriate combinations.

For pipe sizes from 54 " to 72 " in diameter, limit the "D" section to a maximum of 5 degree miter on any one end of

For pipe sizes through 48 " in diameter, bends from 15 to 45 degrees may be acco 48 isted using a single elbow. Bends otherwise by the Engineer.

PLAN OF STRAIGHT TEE

PLAN OF ANGLE TEE

## CORRUGATED METAL PIPE

(ㄴ)
PLAN OF STRAIGHT TEE

PLAN OF ANGLE TEE

PLAN

SECTION
*The handling loop may be omitted when
DETAILS OF CONCRETE PIPE CAP

Tees may be required in any size from 12 inch diameter to 4 inch diameter (in 6 inch increments) on main pipe culverts
equal to or greater in diameter than that of the tee. Angle te may be required in any delta angle (of 5 degree increment) between 45 and 90 degrees. Consider a tee section delta angle 90 degrees (straight tees) unless noted otherwise in angle 90 degrees
the project plans.

Example: "18-36 inch Tee" means an 18 inch diamete 90 degree lateral tee attached to a 36 inch main pipe
culvert.
Example: " $24-48$ inch 75 degree Tee" means a 24 inch diameter lateral tee attached to a 48 inch main pipe diameter
culvert at an angle of 75 degrees.
Fabricate the tee in such a manner as to be as free from obstruction on the inside of the pipe as is reasonable. Use a method approved by the Engineer.
CORRUGATED METAL PIPE TEE: Repair damage to protective coating resulting from installation of culvert as directed by the Engineer.
CONCRETE PIPE TEE:
Length of main pipe section (L) is a minimum of 4 feet and a maximum of 8 feet. The length of main pipe section will be included in the measured length of structure.
CONCRETE PIPE CAP
The use of an approved pipe cap is required when so indicated on the detail project plans. Ensure the dimensions of the pipe cap are such that the pipe cap neatly fits the groove end of th
appropriate size of culvert pipe.

The cap may be precast or it may be cast directly into the pipe end with a tight mortar joint between the cap and the pipe. Place an approved bituminous joint material between the cap
and the pipe if the cap is positioned at the construction site. Installation of pipe cap is incidental to other pipe culvert work on the project.

REVIIIONS: Modified Concrete Pipe Tee note to maximum 8 feet.

DESIGNER INFORMATION

Dimension ' $E$ ' shown is the minimum and is considered the design length. Adjust for any difference between the actual
length of concrete apron installed and the length indicated hereon within the length of concrete culvert pipe furnished. Install connected pipe joints as shown on DR-121

When specified in the contract documents, install pipe apron guards as shown on DR-213. Pipe apron guards are incidental to "Concrete Aprons"
Slight variations in both shape and dimensions from those shown may be accepted if approved by the engineer
(1) Tongue end used on inlet end section. Groove end used

Install aprons and hardware fabricated from galvanized stee complying with Section 4141 of the Standard Specifications Alternate design details may be submitted to the Engineer for
approval.

Comply with the following
All 3 piece bodies are to have 12 -gage sides and 10-gage center panels. Multiple panel bodies are to have lap seams which are to be tightly joined by
2. For the 77 " $\times 52$ " and 83 " $\times 57$ " sizes, the reiforced edge is to be supplemented by galvanized angles. The angles are to be attached by galvanized nuts
3. Angle rein

Angle reinforcement is to be placed under the
center panel seams on the $77 " \times 52^{\prime \prime}$ and $83 " \times 57{ }^{\prime \prime}$
sizes.
4. Galvanized Toe plate is to be available as an accessary when specified on the order and is to be the same gage as the end section.

Aprons may be attached to culvert pipe as follows
A. If culvert is of circumferential corrugation, use an
approved bolt or clamp to fasten apron directly to
approved bolt or clamp to fasten apron directly to
culvert
B. If culve
1.

1. Use an approved sizing ring securely fastened to inside diameter of apron to connect to the culvert pipe using a special dimple band 2. "Dimple" b

For the End Wall, match the thickness "T" and reinforcing used for the pipe apron.

Dimension " E " shown is the minimum and is considered the design length. Adjust for any difference between the actual length of concrete apron installed and the length indicated

Install connected pipe joints as shown on DR-121.
When specified in the contract documents, install pipe apron guards as shown on DR-213. Adjust connection locations to avoid conflict with end

Slight variations in both shape and dimensions from thos shown may be accepted if approved by the engineer.
(1) Tongue end used on inlet end section. Groove end used on outlet end section.

Contract Item:
Apron, Concrete
Possible Tabulation: 104-3

Provide guard dimensions to fit with Type of apron provided (DR-201, DR-202, DR-205, or DR-206). 'V' Bar is to completely rest on apron.
Use Grade 40, Grade 60 or merchant quality, smoothed or deformed steel bars in construction of the guard. Comply with fabrication requirements of Section 2404 of the Standard Specifications
Hot-dip galvanize the completed apron guard according to ASTM A123.

Use bolts, nuts, washers, and fasteners complying with Article 4153.06 of the Standard Specifications.
(1) All guards are to have at least one intermediate cross ater, use two intermediate cross bars equally spaced.

Possible Tabulation:
$104-3$
