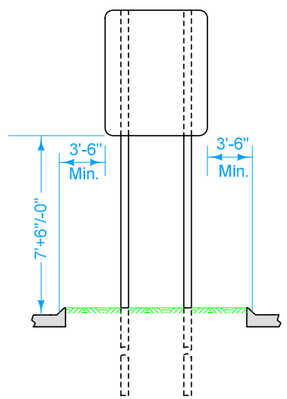
TYPE 1 INSTALLATION



FRONT VIEW
SIGN LOCATION
Type 3 Installation

Type 3 installation is intended to show the requirements for a Type 'A' sign when installed in an island or median (where traffic passes on both sides of the sign) as well as for locations where the Type 'A' sign is installed adjacent to a curbed roadway (sign may be located on either side of a roadway as specified in project plans).

Final sign location will be at the discretion of the Engineer.

Use the Type 1 installation in any case except where:
- (A) Specified otherwise in the plans.
- (B) Directed otherwise by the Engineer.
- (C) A Type 3 installation is required due to location in an island or gore area.

Possible Contract Items:
- Remove and Reinstall Sign as per plan
- Wood Posts for Type A or B signs, 4in x 6in
- Perforated Square Steel tube Post (Anchor Series)
- Type A Signs, Sheet Aluminum
- Install Type A Sign

Possible Tabulations:
- 190-51
- 190-61
- 190-62
- 190-66

IOWA DOT

REVISION
1 | 04-19-16

STANDARD ROAD PLAN

SI-101

SHEET 1 of 1

REVISIONS: Changed Lane Edge Line' to 'Edge of Traveled Way'. Replaced 'Y' with numerical value including tolerance. Removed advisory sign from middle view.

APPROVED BY DESIGN METHODS ENGINEER

LOCATIONS-
TYPE 'A' SIGNS

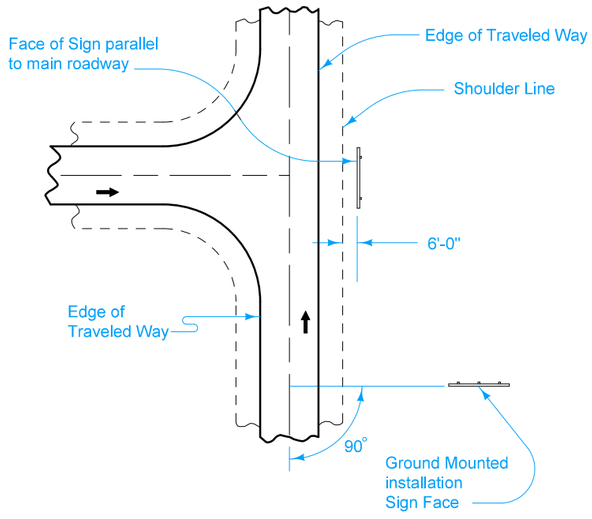
Modification of plan requirements will be permitted only as physical conditions require and are subject to the following limitations:

Provide breakaway sign posts that are a minimum length of 7'-4" plus the height of the sign, unless noted otherwise in the tabulations.

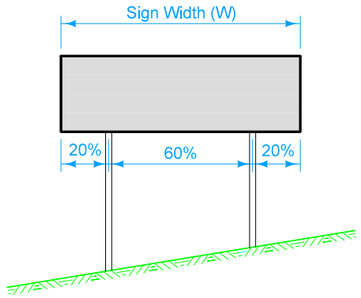
Obtain the Engineer's approaval for spacing between signs less than 800 feet.

Set all signs level.

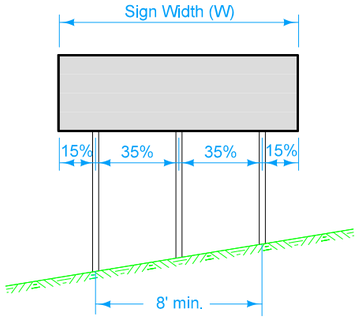
Do not modify sign location without approval of the Engineer.



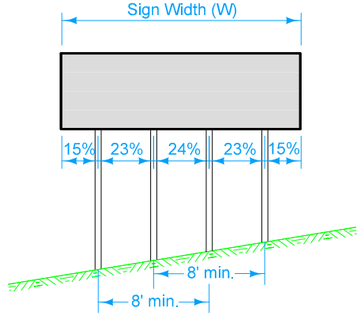
SIGN ORIENTATION PLAN



Two Post Erection



Three Post Erection



Four Post Erection

POST POSITION DETAIL

Possible Contract Items:

- Install Type B Sign
- Perforated Square Steel Tube Posts
- Perforated Square Steel Tube Post Anchor (series)
- Remove and Reinstall Signs as Per Plan
- Type B Signs
- Wood Posts for Type A or B Signs, 4 in. x 6 in.
- Steel Breakaway Sign Post for Type A or B Signs
- Concrete Footing for Breakaway Sign Post

Possible Tabulations:

- 190-50
- 190-61

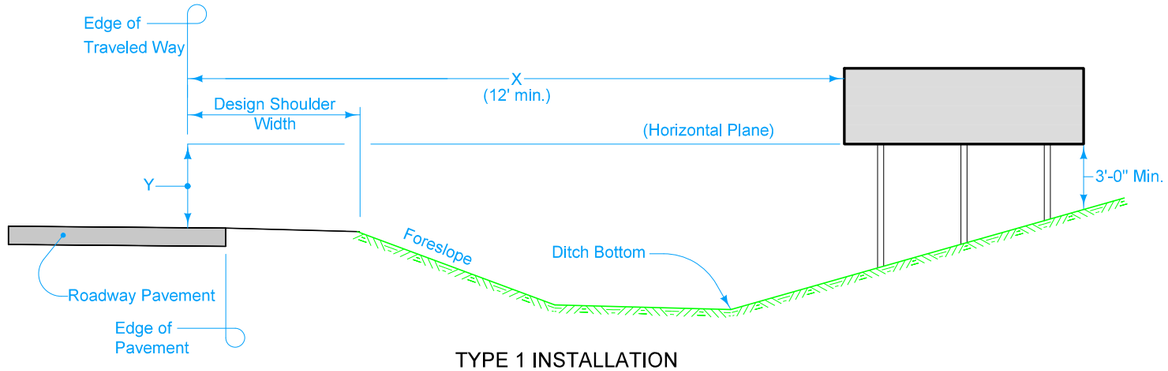
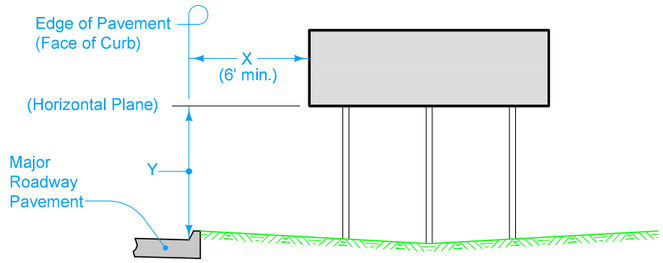
REVISIONS: Changed 'Lane Edge Line' to 'Edge of Traveled Way', modified notes and added Possible Contract Items and Tabs, Added FOUR POST DETAIL

APPROVED BY DESIGN METHODS ENGINEER

LOCATIONS - TYPE 'B' SIGNS

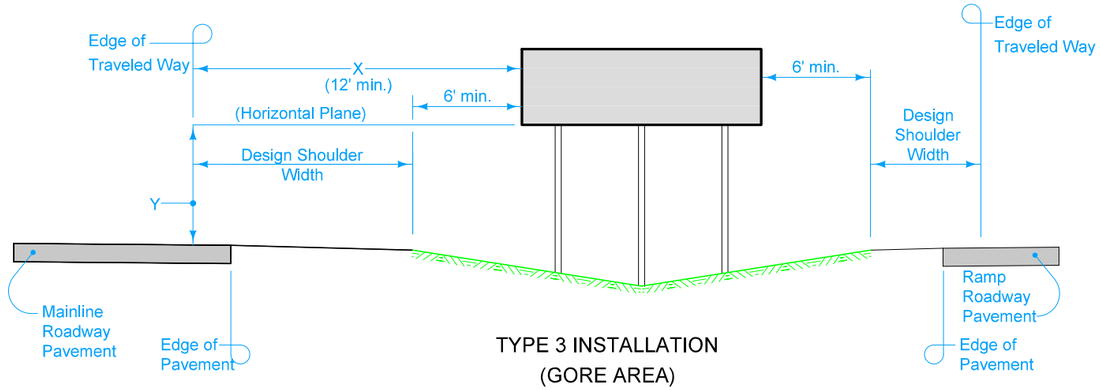


TYPE 1 INSTALLATION
(OFFSET)



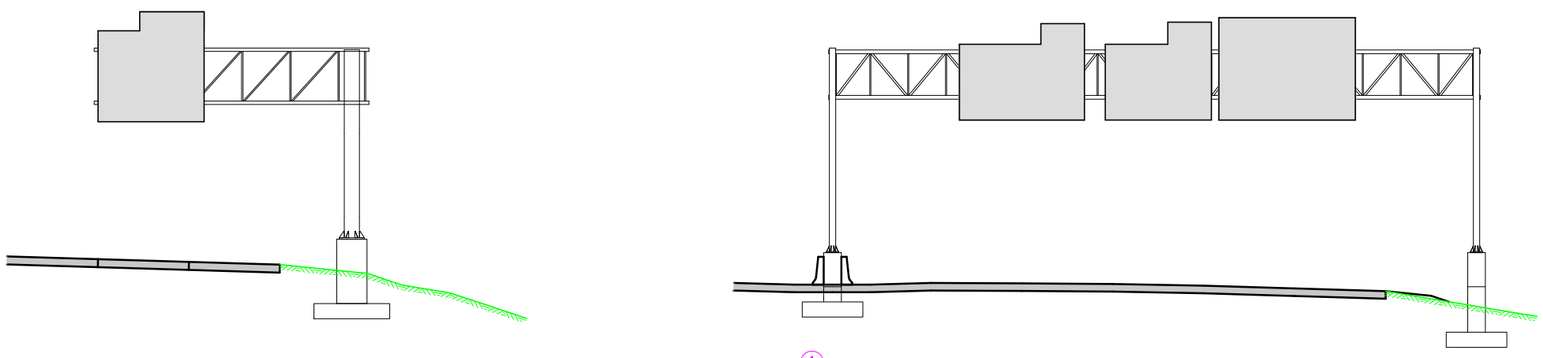
TYPE 2 INSTALLATION
(CURBED SECTION)

Details indicated are for an installation adjacent to a curbed roadway. The sign may be located on either side of the roadway, or in a gore area where curbed roadways pass on both sides, such as an urban freeway exit ramp. When located in a gore area, install where the width between curbs is no less than 12 feet plus sign width.



TYPE 3 INSTALLATION
(GORE AREA)

Details indicated are for an installation in a gore area where traffic on non-curbed roadways passes on both sides of the sign, such as the exit ramp for a rural type interchange.



TYPE 4 INSTALLATION (1)
(OVERHEAD SUPPORT STRUCTURES)

(1) Refer to the Office of Bridges and Structures' Sign Truss Standards as detailed in the contract documents. Cantalevers are special designs detailed elsewhere in the contract documents.

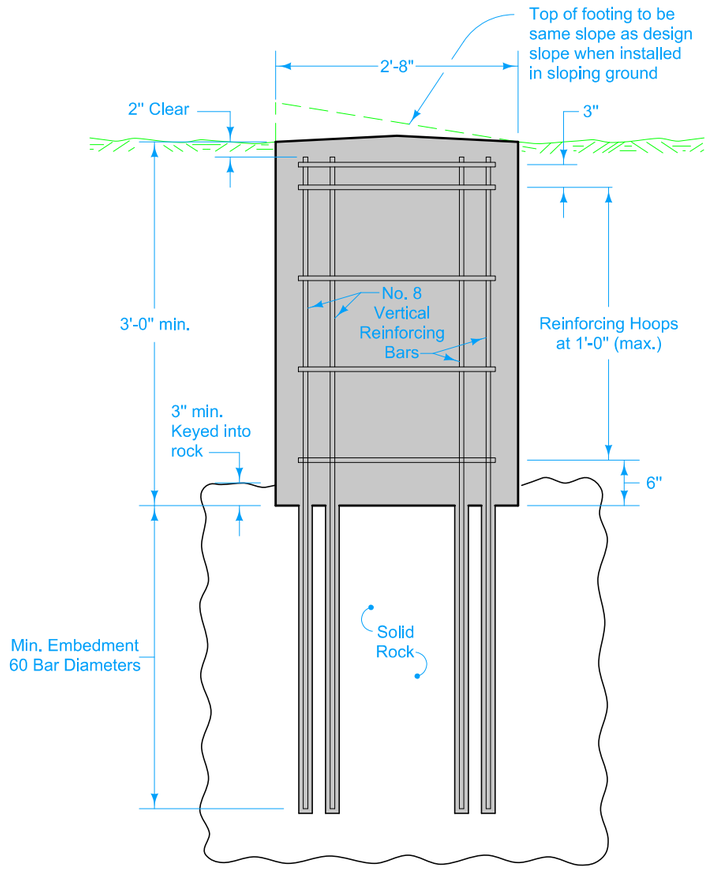
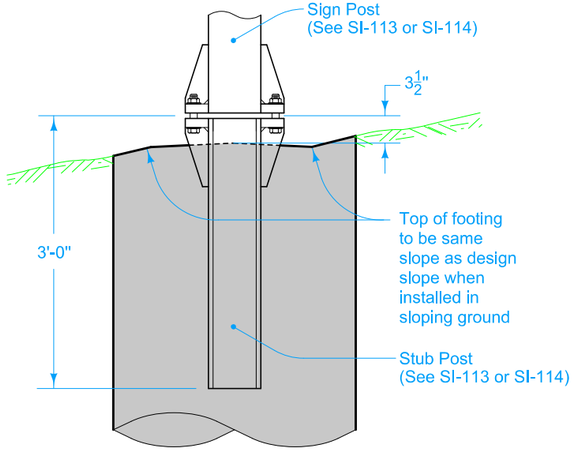
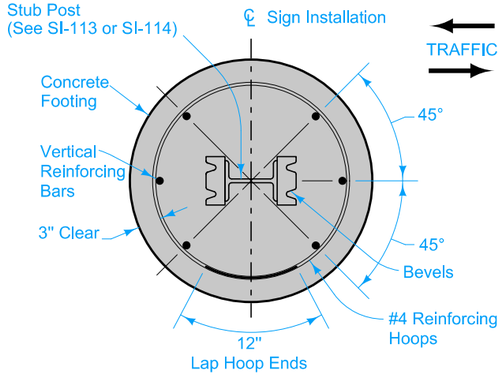
INSTALLATION
NORMAL FOOTING IN EARTH



ALTERNATE DESIGN (3)
FOOTING IN SOLID ROCK



BREAKAWAY POST INSTALLATION



PLAN
(Reinforcing Placement and Sign Orientation)

Construct the footing as shown for normal footing in earth. Where solid rock is encountered, the alternate design for footing in solid rock may be used with the approval of the Engineer.

Dispose of all excavation for the footing in the area adjacent to the footing and shape to normal ground contour, unless directed otherwise by the Engineer.

Hold the stub post in proper position by an approved device to ensure that it remains in proper position upon completion of concrete placement.

The contract price for size of footing required is full compensation for footing as detailed hereon, including all necessary excavation. Excavation in Unexpected Rock will be paid for according to Article 2524.05, I, of the Standard Specifications.

(1) Lengths are for normal footings. Required length may vary where alternate rock design is used.

(2) Refer to the contract documents for post size.

(3) Set vertical bars in solid rock as follows:
1. Drill holes twice bar diameter and fill with water.
2. When hole is fully saturated, blow water out and fill two-thirds depth with sand cement mortar.
3. Insert bar and consolidate mortar.
4. Fill hole to top with mortar.

Possible Contract Item:
Concrete Footing for Breakaway Sign Post

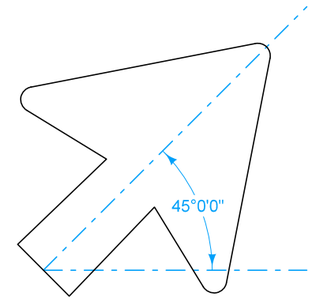
TYPE III

(2) Type II-A arrows should be used in all typical "down arrow" applications except where not practical due to size constraints.



I-E, 45

ARROW DESIGNATION:

Each arrow used on a guide sign is identified by a two part code as follows:

Part 1 is the arrow ID number

Part 2 is the angle in degrees between the center line of the arrow and the horizontal

All dimensions are in inches unless otherwise designated.

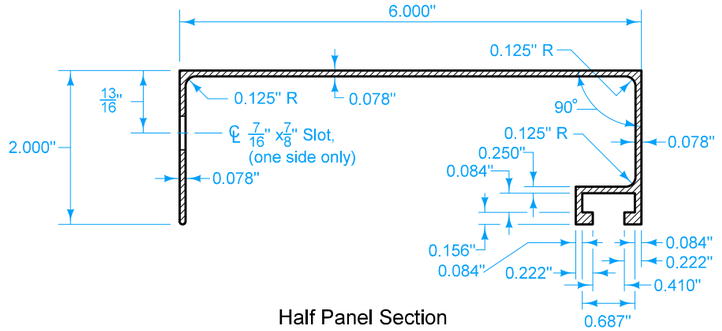
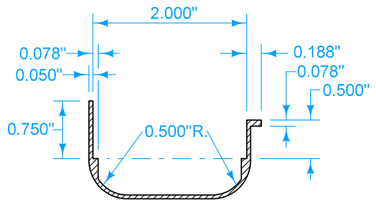
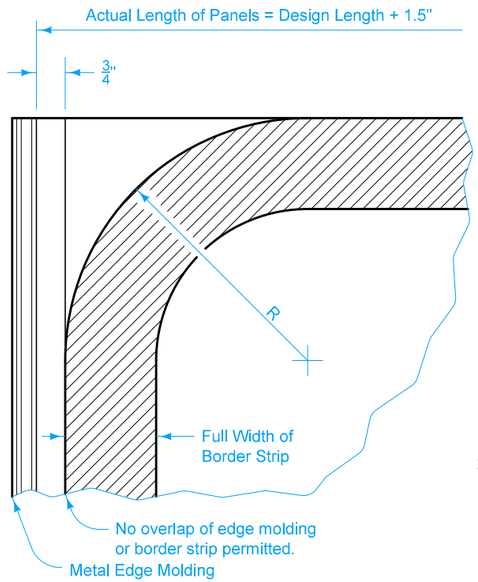
ASSEMBLY DETAIL



Half Panel Section

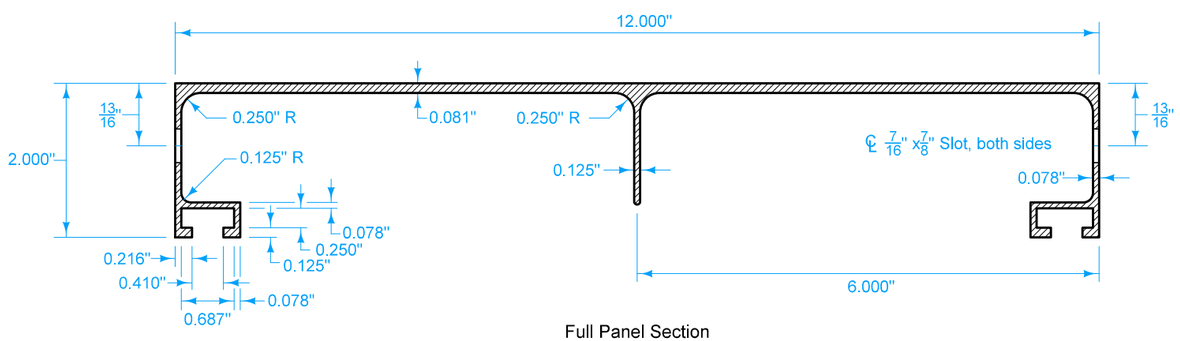


EDGE MOLDING



EDGE MOLDING BORDER STRIP DETAIL

Edge molding shall be installed full length of each vertical side of each sign. Attach in accordance with current specifications.



Full Panel Section

STANDARD STRUCTURAL SIGN PANELS

Panel bolt slotted holes spaced at 12 inch centers shall be located along the full length of each panel, such that the outermost slots are of equal distances (not to exceed 6 inches) from the ends of the panel.

Signs shall be made up of full panels unless a half panel is required, in which case it shall be placed at the top edge of the sign.

Refer to detail project plans and summary sheet for exact data for individual sign fabrication requirements.

① Two washers per panel bolt, one each side of sign.

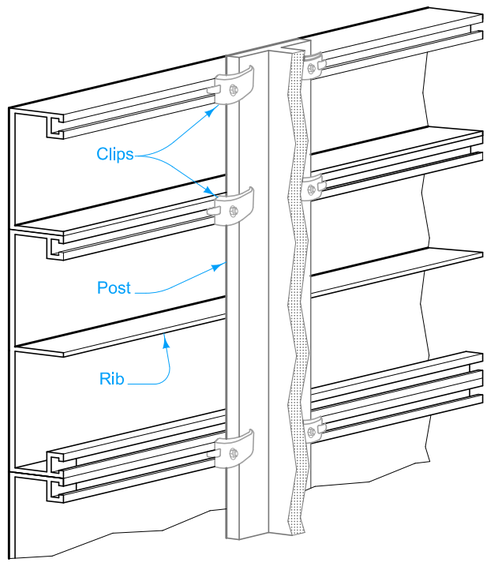
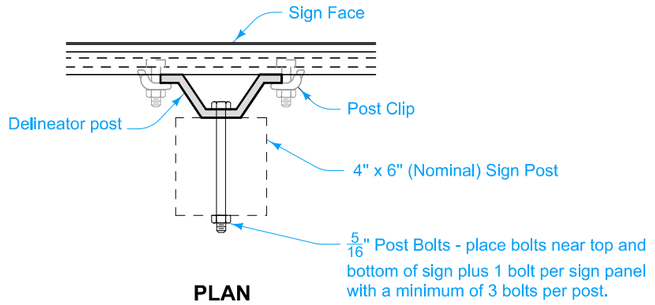
INSTALLATION - TYPE 'A' SIGNS



TYPE 1 ATTACHMENT
Type 1 Attachment shall be used for all signs placed on metal breakaway posts.



PLAN

Position the EXIT NUMBER PANEL above the guide sign aligned with the edge of the guide sign indicating direction of exit.

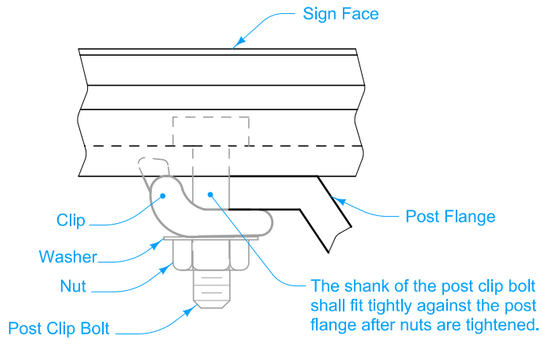
If the bolt holes in the top panel and the bottom panel of the two signs line up, panel bolts are to be used.

If the angle fasteners can not be horizontally placed as shown, they can be moved so as to securely hold the top sign.

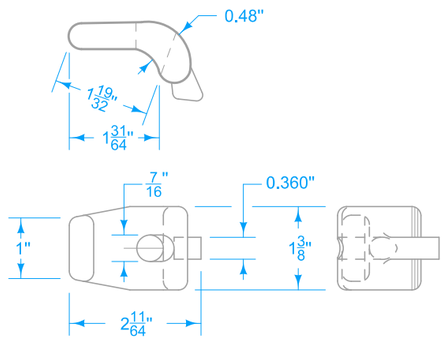
A post clip is required on each angle at top of panel and each extrusion joint.

The aluminum angles are considered part of the mounting hardware and are to be furnished by the Contractor as an incidental item. No separate payment will be made for aluminum angles.

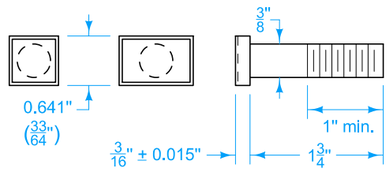
Use cast aluminum post clips and stainless steel nuts, bolts, and washers for post clips meeting the requirements of Article 4186.09, B of the Standard Specifications.



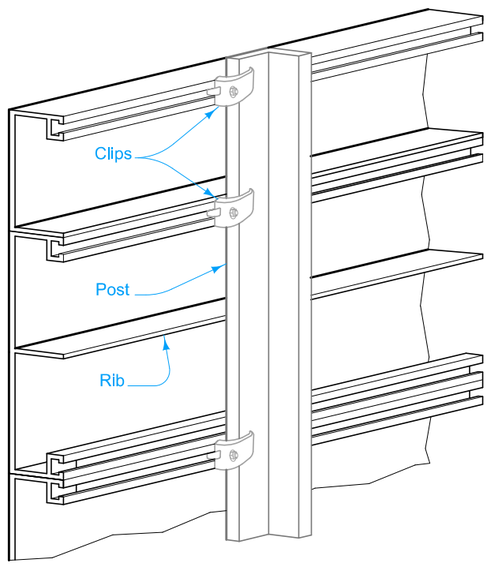
CLIP INSTALLATION



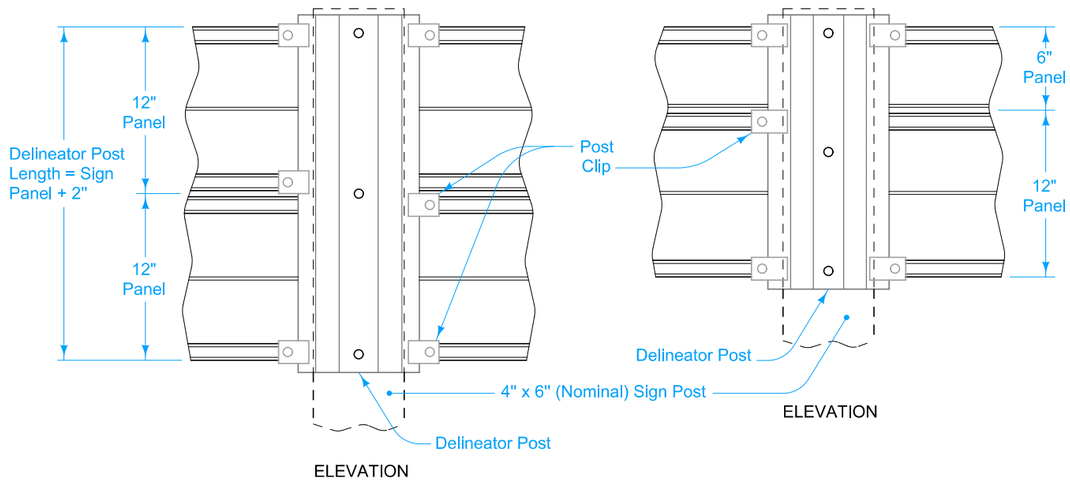
POST CLIP



CLIP BOLT
(Square or Rectangualr Head Optional)



TYPE 4 ATTACHMENT
Type 4 Attachment shall be used for all signs mounted on overhead sign support structures.



TYPE 3 ATTACHMENT
Use Type 3 Attachment for all signs with wood posts.

REFERENCE LOCATION SIGN POSTS

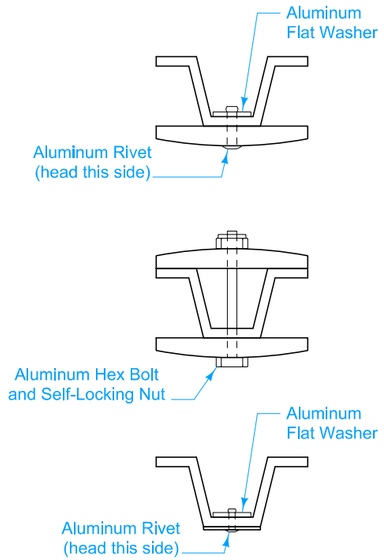
RIGID DELINEATOR MOUNTINGS



ATTACHMENTS

Place delineators at a constant distance from the edge of traveled way and/or the edge of shoulder.

The delineator height is measured from the edge of traveled way or the face of curb.

When placed behind curb, the delineator offset is measured from the face of curb. Allowable offsets are 2 feet minimum and 8 feet maximum. If the curb is part of a shoulder, maintain at least a minimum 8 foot offset from the edge of traveled way.

When placed on the foreslope, the delineator offset is measured from the edge of shoulder. Allowable offsets are 2 feet minimum and 8 feet maximum. However, for shoulders less than 6 feet in width, maintain a minimum 8 feet to the edge of traveled way.

Refer to the project plans for specific offset dimensions.

Furnish white, yellow, and/or red reflectors as specified in the project plans.

Furnish Type I delineator posts. Post lengths are to be sufficient to ensure the proper installation height and provide a minimum of 2'-6" embedment. See Table I for post lengths for various slope and offset conditions.

3/8" or 7/16" holes in the delineators are acceptable.

Install delineators truly vertical.

Delineators placed along freeways and expressways are to be spaced every 0.05 mile along the thru roadway. Placements are based on the reference post marker. A Delineator Reference Point Plaque is required on each delineator for both directions of travel.

Fabricate plaques from 0.063 inch thick sheet aluminum of the appropriate dimensions. Use non-reflectorized sheeting. White for the background, and black for the numerals.

Attach single reflectors to the post with an aluminum, brazier head, blind rivet of $\frac{3}{16}$ inch diameter and a grip range of 0.376 to 0.625 inches, and an aluminum flat washer of 0.193 in. ID x 0.750 in. OD x 0.091 in. thickness.

Attach back to back reflectors to the post with an aluminum $\frac{3}{16}$ in. dia x $2\frac{1}{2}$ in. length hex head bolt with a matching self-locking nut.

Attach plaques to the post with an aluminum, brazier head, blind rivet of $\frac{1}{8}$ inch diameter and a grip range of 0.126 to 0.250 inches, and an aluminum flat washer of 0.129" ID x 0.750" OD x 0.091" thickness.

Furnish materials complying with Section 4186 of the Standard Specifications.

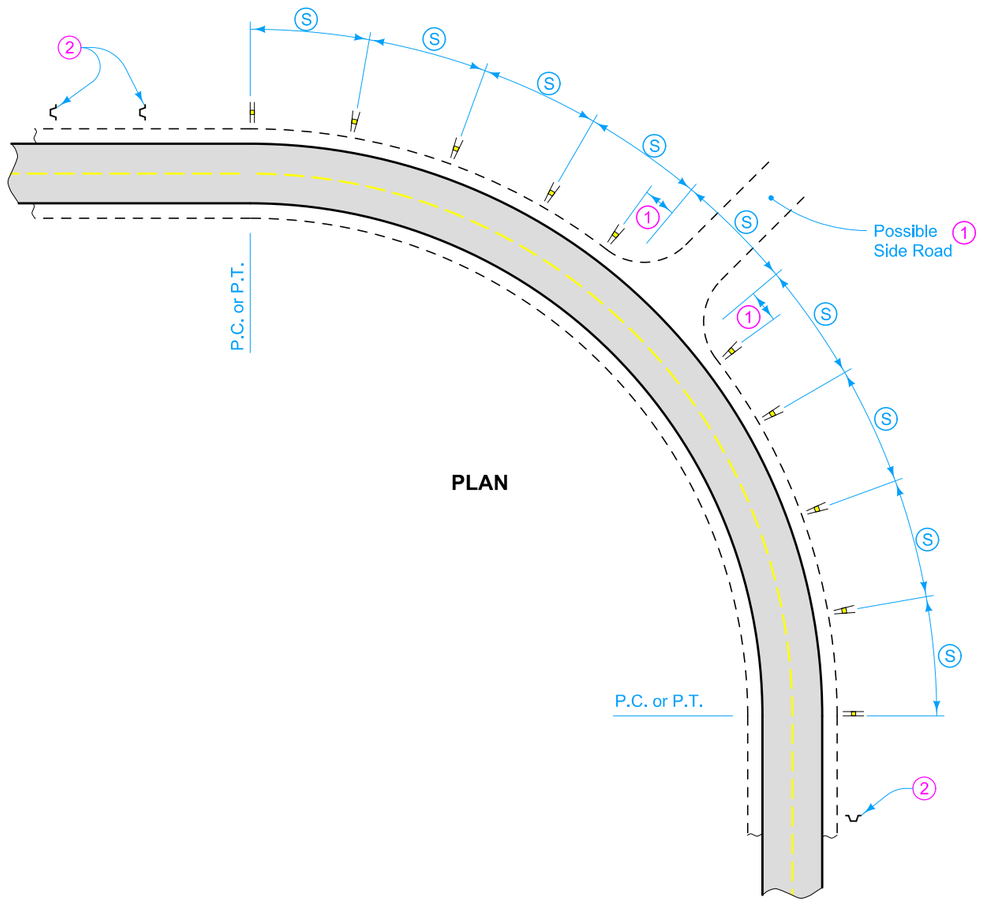
DESIGNER INFORMATION



PLAN

To be effective, Chevron Sign Panels should be visible for at least 500 feet. Attach Chevron Sign Panels to the adjustable brackets at an angle so headlight beams are not reflected back into the driver's eye.

Furnish adjustable brackets in all aluminum or all galvanized steel products. Include locking devices on all bolts.

Each correctly installed "Guidance Marker, Chevron W1-8 (Special)" will be counted and paid for at the contract unit price. Payment is full compensation for furnishing and installing one wood post, two chevron W1-8 sign panels, approved mounting brackets, braces, and all work necessary to install as shown.

1. Adjust chevron locations as necessary to meet (S) as near as possible.
2. Possible delineators.
3. Align horizontal placement of Chevrons with roadway delineators if applicable.
4. Perforated Square Steel Tube (PSST) may be substituted for the wood post if allowed by the Engineer.

SIGN PANEL INSTALLATION 5

Price bid for "Permanent Road Closure, Rural, SI-181" includes furnishing and installing the barricade, signs, posts, and hardware.

The length will be measured in linear feet based on the width of standard sign panels installed.

The Contractor will be paid the contract unit price per linear foot.

Minimum Barricade length = design width (W).

1. Design width (W) equals width of existing roadway and shoulders.
2. Install posts accordind to Section 2524.03.B.1 of the Standard Specifications.
3. Assemble the wood frame with standard strength, hot dip galvanized bolts, nuts and washers according to the following specifications:

   Bolts - ASTM A307
   Nuts - ASTM A563
   Washers - ASTM F884
   Galvanization - ASTM F2329.

4. Recess all bolt heads in a $1\frac{1}{4}$ inch diameter x $\frac{1}{2}$ inch deep hole to allow sign panels to lay flush on the planks.
5. Use 0.063 inch aluminum blank for sign panel. Install sign panel meeting the requirements of Section 2524 of the Standard Specifications. Attach sign panels to the planks along the top and bottom at 2 foot centers using #10 x $1\frac{1}{4}$ inch self-drilling, phillips, pan head, 18-8 stainless steel screws. Use a 1 in. OD x $\frac{1}{8}$ in. thick neoprene washer between the sign panel and the treated wood plank to prevent corrosion.
6. Use pressure treated 4 in. x 4 in. x 12 ft. nominal boards for posts, and pressure treated 2 in. x 10 in. x variable length nominal boards for planks. Use planks of sufficient length to span at least 2 posts.
